Course Overview

This course is an overview of the institutional and practical aspects of the banking and financial sectors of the economy, with emphasis on how the two sectors impact on the economic well being of workers, consumers, and investors. This course is designed for students with no previous knowledge or training in economics. Topics to be discussed include: interest rate determination, operation of the banking system, banking policy and supervision, liquidity, money supply and exchange rate systems, investment returns, stock markets, risk diversification and portfolio choice, and their relationships with consumer prices, trade, investment, unemployment and the level of economic activity.

Learning Outcomes

Students should be able to understand the basic operation of financial market after completing this course. You might apply and interpret basic valuation methods to financial instruments such as equity, debt, derivatives. You would appreciate how the banking system and financial markets impact on the livelihood of everyone in society. You might also know how to read financial news or data, and apply relevant concepts and tools, to analyze some financial and banking activities such that you could understand the influence of financial markets functioning on general public in society.
